What is WCA's Vision for **MATH?**

The Upper School Mathematics department provides a prescribed and sequential course of mathematics study for students in grades 7 through 12. By creating an environment that develops wonder and investigation, our teachers engage students so that they learn to think logically, critically and mathematically. Socratic questioning and investigative inquiry are methodologies that allow students to consider the Maker of Mathematics. Disciplined practice and consistent review allow students to progress from Pre-Algebra through Calculus.

Students at WCA have the opportunity to think mathematically in all of their subjects. Teachers work diligently to integrate mathematics and their revolutionary ideas and advances. The Classical Christian student is able to step back and see the big picture of the advancements of mathematics.
